The Leader in 3D Laser Scanning Since 1987

Description

Touch Probe Weight Extensions are designed for use with the Head Index. The weights function as mounting posts for a Renishaw touch probe, which is used for aid in machine calibration. The weights screw simply into the Index Head after removal of the laser. They are of similar weight to the laser and extend the touch probe to an equivalent to the center of the laser's field of view. The 530-0217-DS is use with Renishaw PH-9 and PH-10 touch probe and the mounts having 3/8" post.. The 530-0217-DS-1 is the same as the tapered extension, only using different touch probes having 3/8" posts.
